

I'm a part-time software developer and third-year student at [Case Western Reserve University](#).

I am passionate about the development of intelligent software and machine learning. Web programming has been hobby of mine that has turned into a full-time job when I'm not in class.

I'm currently familiarizing myself with machine learning and I write side projects attempting to implement algorithms I've learned in class. I have yet to find a more fascinating area of CS than Artificial Intelligence. If *you* know one, I'm all ears!

Besides writing code, I compose music, strum/pick on the guitar, and rattle the snare on drums. A [song generator](#) is in the works so I can stop using my brain to compose. For now, it only generates lyrics, but I'm setting a deadline here to have it make grammatically correct sentences, create sheet music, and midi songs by the end of summer 2014.
